

## JAPANESE QUAIL (*Coturnix coturnix japonica*) FARMING

ICAR RESEARCH COMPLEX FOR NEH REGION  
UMIAM, MEGHALAYA

### Why this technology

- Japanese quail farming have a bright scope to provide alternative to chicken farming.
- Quail is reared both for meat and egg production.
- Quail meat and egg have high nutritive value with amazing taste.
- Quail has unique qualities of hardiness and adoptability to diversified agro-climatic conditions.
- Quail farming requires less housing and capital investment.

### What is this technology

- Japanese quail can be reared under deep-litter and cage system.
- Japanese quails are resistant to many diseases as compared to other poultry species and as such do not required vaccination.

System of rearing : A : Brooding B : Japanese quail under deep-litter system C : Japanese quail egg  
D : Japanese quail meat

### For whom is this technology

- Technology is for the farmers as an alternate poultry production.
