

## **Tips for ginger growers in NEH region**

1. Since the crop is now in biological maturity stage, it is recommended to go for early and timely harvesting of crop and may be utilized for preparation of value added products like ginger paste, candy etc., wherever possible
2. In case of delayed marketing of produce, it should be properly shade dried and marketed later
3. Healthy planting material of recommended variety 'Nadia' should be used
4. Planting material should not used from the field having soft rot infection
5. Same piece of land should not be used for ginger cultivation, especially in case of soft rot disease problem
