

Integrated Agromet Advisory Service Bulletin from 29th Nov to 3rd Dec'17 Dimapur District

Bulletin No:93/2017

<i>Weather summary of the preceding week</i>	<i>Weather forecast valid upto 3rd Dec'17</i>
<ul style="list-style-type: none"> ▪ No rain occurred the past week ▪ Maximum and minimum temperatures ranged 29^oC to 30^oC and 15^oC to 17^oC, respectively. ▪ Relative humidity varied from 40% to 88%. ▪ Wind speed ranged from 3 to 4 kmph 	<ul style="list-style-type: none"> ▪ Probability of no rain the coming week. ▪ Max temp is likely to be 25^oC - 26^oC and the min temp 14^oC to 15^oC ▪ Sky is likely to be clear the coming week ▪ Relative Humidity is likely to range from 34% to 88%. ▪ Wind speed may reach upto 3- 4 kmph ▪ Wind direction will be mostly easterly
<ul style="list-style-type: none"> ▪ NDVI for Nagaland 	

Field crops

Toriam and linseed should be sown as second crop utilizing the residual moisture in the field after the harvest of early to medium duration paddy varieties.

Sow zero tillage lentil and pea after rice by opening small furrow between rice stubbles.

Mulching is essential to the rabi crops. Need based life saving irrigation is essential for rabi crops.

Main Crops	Stage	Pest/ Diseases	Agro-meteorological Advisories
<i>Jhum paddy</i>	Post Harvesting stage		<i>Follow sanitation during drying, milling and after milling to avoid contamination of grains and protect from insects, rodents and birds.</i>
<i>TRC/WRC paddy</i>	Dough development stage	Grasshopper	<i>It feeds irregularly on seedling and leaf blade and cuts the stem during the panicle stage. Bunds should be cleaned at regular interval.</i>
<i>Toria</i>	Sowing	-	<i>Quality seeds should be used. M-27, TS-36 and TS-38 are some of the varieties recommended for our region</i>
<i>Rabi maize</i>	Seedling stage		<i>Provide mulching to conserve moisture</i>

Horticultural crop			
Use well drained soils, field sanitation should be maintained. Seed bed should be in good tilth, free from diseases and weeds.			
Citrus		Fruit flies	<i>Once fruit is stung it is too late for anything but planning for a better result next year! You can check fruit for tiny dimples or weeping clear sap. Remove and destroy any stung fruit, it is more effective to do this straight away than picking up rotten fruit from the ground as the maggots may have already left the fruit to pupate</i>
Vegetables	Germination stage		<i>Thinning should be done and gap filling should be carried out</i>
Cauliflower, cabbage,			<i>Transplanting of cabbage and cauliflower should be done at a spacing – 30 x 60cm for small varieties. 45 x 60 cm for large varieties Keep the field free from weed. Hand hoeing should be done after transplanting</i>
Litchi			<i>Mulch the tree basin, protect young litchi plants from cold and suppress new flush by application of growth inhibitors</i>
Ginger / turmeric	Maturity stage		<i>Field must be inspected daily for disease appearance. While inspecting, the healthy plants/plots must be marked and kept for planting in the next season. Marking has to be done properly otherwise when plant matures and gets dried up, it will be very difficult to find out the marked plots.</i>
Livestock			
Vaccination of animals should be done against out-break of major diseases. Provide clean and cool drinking water to the animals			
Poultry	<ol style="list-style-type: none"> 1. Protect the birds from cold draft by covering the exposed windward areas using gunny bags and other locally available materials 2. Deworm the birds once every 2 months 		
Piggery	<ol style="list-style-type: none"> 1. Protect the animals from cold draft using gunny bags and other locally available materials 2. Provide protein rich ration and ad libitum clean drinking water 		
Fisheries			

If the pond has minimum 1m depth water, apply lime @ 50kg/bigha along with raw cow dung @ 125 kg/bigha, Urea 3.5 kg/bigha, SSP 2.7 kg /bigha.
If water depth is less than 1m harvest 50% of the stocked fish

Horticultural crop

Use well drained soils, field sanitation should be maintained. Seed bed should be in good tilth, free from diseases and weeds.

Citrus		Fruit flies	<i>Once fruit is stung it is too late for anything but planning for a better result next year! You can check fruit for tiny dimples or weeping clear sap. Remove and destroy any stung fruit, it is more effective to do this straight away than picking up rotten fruit from the ground as the maggots may have already left the fruit to pupate</i>

Integrated Agromet Advisory Service Bulletin from 29th Nov to 3rd Dec'17 Wokha District

Bulletin No:93/2017

ICAR RESEARCH COMPLEX FOR NEH REGION

(Indian Council of Agricultural Research)

<i>Weather summary of the preceding week</i>	<i>Weather forecast valid upto 3rd Dec'17</i>
<ul style="list-style-type: none"> ▪ No rain occurred the past week ▪ Maximum and minimum temperatures ranged 23°C to 24°C and 12°C to 13°C, respectively. ▪ Relative humidity varied from 43% to 92%. ▪ Wind speed ranged from 4 to 5 kmph 	<ul style="list-style-type: none"> ▪ Probability of no rain the coming week. ▪ Max temp is likely to be 23°C - 24°C and the min temp 13°C to 15°C ▪ Sky is likely to be clear the coming week ▪ Relative Humidity is likely to range from 17% to 80%. ▪ Wind speed may reach upto 2- 4 kmph ▪ Wind direction will be mostly southeasterly
<ul style="list-style-type: none"> ▪ NDVI for Nagaland 	

Field crops

Toria and linseed should be sown as second crop utilizing the residual moisture in the field after the harvest of early to medium duration paddy varieties.

Sow zero tillage lentil and pea after rice by opening small furrow between rice stubbles.

Mulching is essential to the rabi crops. Need based life saving irrigation is essential for rabi crops.

Main Crops	Stage	Pest/ Diseases	Agro-meteorological Advisories
<i>Jhum paddy</i>	Post Harvesting stage		<i>Follow sanitation during drying, milling and after milling to avoid contamination of grains and protect from insects, rodents and birds.</i>
<i>TRC/WRC paddy</i>	Dough development stage	Grasshopper	<i>It feeds irregularly on seedling and leaf blade and cuts the stem during the panicle stage. Bunds should be cleaned at regular interval.</i>
<i>Toria</i>	Sowing	-	<i>Quality seeds should be used. M-27, TS-36 and TS-38 are some of the varieties recommended for our region</i>
<i>Rabi maize</i>	Seedling stage		Provide mulching to conserve moisture
